

A Rainy August

Düsseldorf, 13. September 2021 – First, a low-pressure system spread over the British Isles, then polar air also came to Germany: August was relatively cool, wet and sunless. Nevertheless, the solar plants were able to achieve their target values. The energy harvest from wind power was also almost on target. "It remains the same: When investing in renewable energies, diversification is the key to smooth-out fluctuations", says Markus W. Voigt, CEO of aream Group.

In August, the sun shone rather rarely in Germany, and the average temperature of 16.4 degrees Celsius was significantly below the historical comparative values. In addition, rainfall increased by almost 30 percent. Nevertheless, production from solar energy in Germany made a precision landing at one hundred percent of the target value. Spain fared worse, achieving only 87 percent. In Italy, on the other hand, the target was exceeded by four percentage points.

The wind blew more strongly again in August than in the previous month. The German plants achieved 95 percent of their target values. Since the beginning of the year, they are now 15 percentage points below their target.

Weather cannot be reliably predicted and therefore remains a factor of uncertainty in renewable energy production. "However, the resulting investment risk can be managed", says Voigt. After all, if you invest in different locations and forms of energy, you can assume that regional or short-term fluctuations will even out in the end.

About aream

The aream Group is a fully integrated investment and asset manager for institutional investors with a focus on sustainable infrastructure in the renewable energy sector, which includes wind and solar power, grids and storage technology. In this context, aream is represented along the entire value chain from project development to plant operation. With a transaction volume of more than EUR 1.5 billion, the company has been covering the entire spectrum of asset management services for over 15 years and ensures the commercial and technical optimization of the assets. In addition to classic project investments in clean energy, aream also offers investment opportunities in climate-tech companies: directly or via private equity solutions. aream combines investment expertise with technical and commercial know-how and ensures sustainable performance with stable distributions, returns and value growth through a structured investment and risk management process.
